Education

University of Central Florida — Orlando, FL
B.S. in Computer Science – transfer starting Fall 2027 — *Expected Graduation: Dec. 2029*

Valencia College — Orlando, FL
A.A., Computer Science Transfer Track — *Expected: May 2027*
Relevant Coursework: Java, C, and Python Programming; Database Design; Systems and Networks

Technical Skills

Languages: Python, Java, C, JavaScript, SQL, HTML/CSS
Frameworks and Libraries: FastAPI, React, Node.js, Flask, SQLModel, SQLAlchemy, Pydantic
Databases and Tools: PostgreSQL, Git, Docker, Alembic, Linux, Vercel, Proxmox VE, Active Directory

Experience

Customer Management Systems Specialist — Jan. 2026 – Present
Hilton Grand Vacations — *Kissimmee, FL*

- Administer **NICE CXone and TCN** contact-center platforms for **10,000+ end users**, provisioning agents and skill-based routing.
- Manage **Active Directory** account creation, password resets, and access troubleshooting.
- Resolve Tier 1 audio and application issues in CXone, TCN, and Cresta AI; set up and reimage workstations.

Software Engineer Intern — Sep. 2025 – Jan. 2026
Madre Tierra Cigars | madretierracigars.com — *Kissimmee, FL*

- Designed, built, and deployed a **six-route JavaScript web application** for a Dominican cigar brand entering the U.S. market, reaching **300 monthly visitors**, with a session-scoped 21+ age-verification gate.
- Built **Node.js serverless functions on Vercel** using Resend and EmailJS to handle contact and notification email, with a **30-second cooldown** that suppresses duplicate sends.

Projects

Inventory Management API | *Python, FastAPI, SQLModel, PostgreSQL, Docker* | Code — 2026 – Present

- Built a **FastAPI backend exposing 15 REST endpoints** for inventory and orders, integrated with a React frontend.
- Separated client, product, and order workflows into router, service, and CRUD layers to isolate business logic from HTTP handling and database access.
- Modeled four normalized PostgreSQL entities with Alembic migrations; stored quantity and unit price in an order-product join table to preserve historical sale prices.

ADACVA – Accessible Piano Tutor | *Python, MediaPipe, Mido, OpenAI API, Audiveris* | Code — 2026

- Designed a **modular Python prototype** for visually impaired piano learners, separating hand tracking, MIDI input, score processing, playback, and spoken feedback so module failures affect only dependent features.
- Integrated MediaPipe hand tracking and Mido keyboard input with an **Audiveris PDF-to-MusicXML pipeline** to support hand-position guidance and comparison of played notes with sheet music.
- Integrated **GPT-4.1 mini** via the OpenAI API as a tutor giving spoken conversation and performance feedback.

Study Buddy – Knight Hacks VIII | *JavaScript, Python, Flask, Arduino* | Code — Oct. 2025

- Built a Pomodoro system on a **four-person hackathon team**, connecting a Manifest V3 Chrome extension to an Arduino UNO R4 phone dock that automatically starts focus sessions.
- Implemented browser-to-hardware synchronization through a **Python (Flask) serial bridge**, monitoring tab navigation against a user allowlist and signaling the Arduino.

Self-Hosted Infrastructure Lab | *Proxmox VE, Linux, Docker, Pi-hole, Nextcloud* — Ongoing

- Operate **7 workloads across 2 virtual machines and 5 containers** on Proxmox VE, including Pi-hole DNS filtering and Nextcloud file synchronization with per-user access controls.
